1. Draw a horizontal line in the lower third of your paper

2. Draw a vertical line near the center of the paper

3. Place a dot (vanishing point) at both ends of the horizontal line

(Tape the paper on a larger sheet)

4. Using a ruler, draw a line from the vanishing points to the top and bottom of the vertical line

5. Draw the ends of the house by drawing 2 vertical lines, forming a left and right side of a box.

6. To draw a roof, 1st make an “X” on the short side of the house from corner to corner. Where the “X” intersects, draw a vertical line into the air.

7. The triangle that forms the peak of the roof is made from this vertical line

8. The top of the roof is drawn from the right hand vanishing point to the top of the triangle. Match the angle of the roofs peak to the angle of the opposite peak.

9. Windows and doors are drawn by using the vanishing points to give the top and bottom lines of the windows. Vertical lines form the sides of the windows.
